March 2017

Date: March 2017	Item-032
To: Users of the CCHS, 2009-2012, and 2014	
Subject: CCC_131 and CCC_31A are inaccurate by as much as 0.006%.	
Product(s) affected: Annual and biannual Master, Share and PUMF files between 2009-2012 and the 2014 annual file	
Year(s) affected: All cycles, including the 2011-2012 biannual file	

Description of the problem(s): A limited number of responses to the CCHS are modified each cycle during data processing to correct for inconsistencies and logical impossibilities in respondent answers. Two consistency edits in the aforementioned cycles have been incorrectly applied. The first table below demonstrates the consistency edit applied in processing, the second table demonstrates the corrective action that should have been taken instead:

Concept	Edit applied	Incorrect action
Reports having follow-up treatment for colorectal cancer but previously reported never being diagnosed with cancer	Had colorectal cancer screening (CCS_83E=1) and does not have cancer (CCC_131 = 2)	CCC_131 = 1 CCC_31A = NA
Reports having follow-up treatment for breast cancer but previously reported never being diagnosed with cancer	Had follow-up of breast cancer treatment (MAM_31E = 1) and does not have cancer (CCC_Q131 = 2)	CCC_131 = 1 CCC_31A = NA

Concept	Edit that should have been applied	Correction that should have been taken
Reports having follow-up treatment for colorectal cancer but previously reported never being diagnosed with cancer	Had colorectal cancer screening (CCS_83E=1) and (CCC_31A = 2,DK,RF or CCC_131 = DK)	CCC_31A = 1
Reports having follow-up treatment for breast cancer but previously reported never being diagnosed with cancer	Had follow-up of breast cancer treatment (MAM_31E=1) and (CCC_31A = 2,DK,RF CCC_131= DK)	CCC_31A = 1

Suggested correction(s): Although this issue cannot be corrected, the two variables affected a maximum of 3 respondents per cycle, or less than 0.006% of respondent records.

Correction steps: N/A

March 2017

Date: March 2017	Item-031
To: Users of the 2009-2010, 2010, 2011-2012, and 2012 PUMF	
Subject: CHPG10 - Incorrect variable category description	
Product(s) affected: PUMF Derived Variable Documentation (French only)	
Year(s) affected: 2009-2010, 2010, 2011-2012, 2012	

Description of the problem(s):

The label for CHPG10=6 in the French Derived Variable documentation is incorrectly labelled as HCU_03C=6.

Suggested correction(s): The label of this response category should be:

Valeur	Condition(s)	Description
6	CHP_10 = 6	La plus récente consultation avec un autre médecin était à un CLSC / Centre de santé communautaire.

This change affects only the condition field found in the French version of the Derived Variable documentation, and therefore the data are not impacted.

Correction steps: Use response category and condition labels as detailed above.

March 2017

Date: June 2015	Item-030
To: SAS and SPSS users of 2005-2010 files	
Subject: EDUDR04 - Incorrect variable label	
Product(s) affected: Cycle 3.1(2005) , Cycle 4.1 (2007,2008 and 2007-2008 files) and 2009, 2010, 2009-2010 master, share, rapid response and BC buy in share	
Year(s) affected: 2005,2007,2008,2007-2008, 2009, 2009-2010. Note that the PUMFs for Cycles 3.1 and 4.1 are also affected.	
Description of the problem(s): The label attached to the EDUDR04 variable is incorrect in the layout file provided for SAS and SPSS users. The label for EDUDR04 should be **'Highest level/edu. – respond 4 levels - (D)**' (not household)	
Suggested correction(s): Modify the format *._lbe SAS program or HSvare.sps with the correct label	
Correction steps: N/A	
Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding. Should you have any questions, please do not hesitate to contact us at: Health Statistics Division 613-951-1746 Electronic mail: HD_DS@statcan.gc.ca	

March 2017

Date: June 2015	Item-029
To: Users of the CCHS 2010-2014 Master, Share, PUMF, and Link files	
Subject: Insurance, Personal income, and Health number may not be accurate for 12-17 year olds	
Product(s) affected: Master, Share, PUMF, and Link files	
Year(s) affected: 2010 to 2014, including the two-year files 2011-2012 and 2013-2014	

Description of the problem(s):

When a selected respondent is under 18 years old, there are some household level questions they are not asked. Instead, a person-most-knowledgeable (PMK) is selected form the household to answer the INS, INC, HMC, FSC, and ADM questions.

Unfortunately, in INS, INC, and ADM, there are questions that pertain to the selected respondent. The question text read to the PMK would have been of the form “Do you...”/”What is your...”, so it is possible that these questions were answered by the PMK as it pertains to them.

Below is a list of the questions that may have been affected by this problem:

Variable/Question	Question text	Note
INS_1	Do you have insurance that covers all or part of the cost of: your prescription medications?	Responses to subsequent questions INS_1A/B/C, INS_2A/B/C, INS_3A/B/C, and INC_4A/B/C (type of insurance) would be affected by this as well.
INS_2	(Do you have insurance that covers all or part of:) your dental expenses?	
INS_3	(Do you have insurance that covers all or part of:) the costs of eye glasses or contact lenses?	
INS_4	(Do you have insurance that covers all or part of:) hospital charges for a private or semi-private room?	
INC_6A to INC_6O	Thinking about your total personal income, from which of the following sources did you receive	Data is affected only for 2010, 2011, and 2012. In 2013 and 2014, cases with a respondent under 18

March 2017

	any income in the past 12 months?	were skipped past the personal income questions.
INC_7	What was the main source of your personal income?	
INC_8A, INC_8B, INC_8C, INC_8D	What is your best estimate of your total personal income, before taxes and deductions, from all sources in the past 12 months?	
ADM_Q03A	Having a provincial or territorial health number will assist us in linking to this other information. Do you have a/an ^DT_PROVINCEE health number?	Variables are on the link file as: ADM_Q03B=LNK_HNP and ADM_Q03HN=LNK_HN
ADM_Q03B	For which province or territory is your health number?	
ADM_Q03HN	What is your health number?	

Note that this problem does not affect cases where the interview was being completed by proxy. All of the text would have been read to the proxy respondent as “Does he/she...” / “What is his/her...”/etc..

Suggested correction(s):

There is no way to identify whether or not the PMK answered the questions as they pertained to themselves or the child selected respondent. Use results based on these questions for any 12 to 17 year old respondent with caution.

Correction steps: n/a

Canadian Community Health Survey – Annual Component
Errata

March 2017

Date: June 2015	Item-028

To: Users of the CCHS 2011-2014 Master, Share, and Public use microdate files

Subject: SPSDATT derived incorrectly, incorrect frequencies in data dictionary; SPS DV specification issues.

Product(s) affected: Master, Share, PUMF

Year(s) affected: 2011 to 2014, including 2011-2012 and 2013-2014

Description of the problem(s):

The 'Not stated' category for the derived variable SPSDATT was derived in two different ways:

- Proxy interviews were coded 99
- Cases with either SPS_03 or SPS_08 not answered (don't know, refuse, not stated) were coded as 9

Since the range of possible valid values of SPSDATT is from 2 to 8, the processing code for 'Not stated' should be 99. See below for the correct DV specs.

Another problem with SPSDATT is in the data dictionary frequency report. The frequencies for this variable are shown for the values 2 to 9, which treats the value 9 as a valid score on the social provisions scale. The frequency for the valid scores should only be from 2 to 8. Please do not use the frequencies for SPSDATT listed in the data dictionary.

Suggested correction(s):

Corrected DV specs for SPSDATT are:

Value	Condition(s)	Description	Notes
96	DOSPS = 2	Module not selected	NA
99	ADM_PRX = 1	Module not asked - proxy interview	NS
99	SPS_03 in (7,8,9) or SPS_08 in (7,8,9)	At least one required question was not answered (don't know, refusal, not stated)	NS
SPST03 + SPST08	(1 <= SPS_03 <=4) and (1 <= SPS_08 <=4)	Score obtained on Social Provisions Scale – Attachment (min: 2; max: 8)	

Correction steps: n/a

Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding.

Should you have any questions, please do not hesitate to contact us at:

March 2017

Date: June 2015	Item-027
To: Users of the CCHS 2008, 2011 and 2012 master, share and PUMF	
Subject: PCU_Q152 and PCU_Q153 – label errors	
Product(s) affected: Master, Share, and Public Use Microdata Files	
Year(s) affected: 2008, 2011 and 2012	

Description of the problem(s):
The labels for the categories of PCU_Q153 (When was the last time?) are incorrect on the data dictionary and SAS and SPSS label files. Furthermore, the external names indicated on the questionnaire for PCU_Q152 and PCU_Q153 (for 2012 only) have been incorrectly switched.

Suggested correction(s):

The labels for PCU_Q153 (external name PCU_152) on the data dictionary and SASS/SPSS label files should be:

Code	Labels should be:
1	Less than 1 year ago
2	1 year to less than 2 years ago
3	2 years to less than 3 years ago
4	3 years to less than 4 years ago
5	4 years to less than 5 years ago
6	5 or more years ago

The external names indicated on the questionnaire for these questions should always be:

Question	Concept	Question name	External name
How often do you usually have a general physical check-up?	Frequency - general physical check-up	PCU_Q152	PCU_153
When was the last time?	Physical check up - last time	PCU_Q153	PCU_152

Correction steps: Use response category and question labels as detailed above.

March 2017

Date: June 2015	Item-026
To: Users of the CCHS files	
Subject: Typographical modifications in the descriptions for Work Stress (WST) Derived Variables and change in Derived Variable code for WSTDJST.	
Product(s) affected: Master and share files and public use microdata files	
Year(s) affected: Cycle 1.1, 3.1, and 4.1	

Description of the problem(s):
The following typographical revisions were made to some Derived Variable descriptions.

Most changes only affect the variable descriptions and therefore the data are not impacted. However, the derived variable WSTDJST had an error in the specifications which also resulted in the variable being calculated incorrectly. Data users who are using the WSTDJST variable are instructed to use the code provided in this Errata to correct the variable.

Variable(s)	**E = English F = French**	**Issue and corrected metadata**	**Files affected**
WSTDSKI	E, F	**Revised description -** Description should be changed to: "This variable indicates the respondent's skill discretion at their main work in the past 12 months (skill requirement). It is based on questions about whether the respondent was required to keep learning new things, whether his/her job required a high level of skill and whether the job required that the respondent do things over and over (monotony). 1. Higher scores indicate that lower skills are required for the job. 2. According to the original instrument, higher scores indicate greater work stress. 3. Scores were inversed in the temporary reformat for question WST_Q404."	Derived Variable document

March 2017

WSTDAUT	E, F	**Revised description -** Description should be changed to: "This variable indicates whether the respondent's main job in the past 12 months allows them freedom in how to do their job and if they have a lot of say in what happens with regard to their job. 1. Higher scores indicate lower decision authority. 2. Higher scores indicate greater work stress."	Derived Variable document
WSTDPSY	E, F	**Revised description -** Description should be changed to: "This variable indicates the respondent's psychological demands in their main job in the past 12 months. It is based on questions about whether the respondent is free from conflicting demands and if their main job in the past 12 months is very hectic. 1. Higher scores indicate greater psychological demands. 2. Higher scores indicate greater work stress. 3. Scores were inversed in the temporary reformat for question WST_Q405."	Derived Variable document
WSTDJIN	E, F	**Revised description -** Description should be changed to: "This variable indicates how the respondent feels about their level of job security in their main job. 1. Higher scores indicate greater job insecurity. 2. Higher scores indicate greater work stress."	Derived Variable document
WSTDPHY	E, F	**Revised description -** Description should be changed to: "This variable indicates whether the main job in the past 12 months requires a lot of physical effort. 1. Higher scores indicate greater physical demands at work. 2. Higher scores indicate greater work stress."	Derived Variable document

March 2017

WSTDSOC	E, F	**Revised description -** Description should be changed to: "This variable indicates the social support available to the respondent at his/her main job in the past 12 months. It is based on questions about whether or not the supervisor and the people the respondent worked with were helpful in getting the job done, and whether the respondent was exposed to hostility or conflict from the people they worked with. 1. Higher scores indicate lower social support at work. 2. Higher scores indicate greater work stress. 3. Scores were inversed in the temporary reformat for question WST_Q410."	Derived Variable document
WSTDJST	E, F	**Revised description -** Description should be changed to: "This variable indicates whether the respondent experienced job strain at their main work in the past 12 months. Job strain is measured as a ratio of psychological demands to decision latitude which includes skill discretion (skill attitudes) and decision authority. 1. Higher scores indicate greater job strain. 2. Higher scores indicate greater work stress. 3. Scores are inversed here for questions WST_Q401, WST_Q402, WST_Q403, WST_Q409 (decision latitude questions) for use in the denominator. Since WST_Q404 had been inversed for the calculation of WSTDSKI, it is inversed again before calculating WSTDJST. 4. At the beginning of this section, scores were inversed in the temporary reformat for question WST_Q405. The inversed WST_Q405 is used here (as in WTSDPSY)." **New note for the specifications of the DV (see step 3 on next page):** "All items have +1 added to them so that the denominator will not be 0 under any combination of answers."	Derived Variable document

March 2017

WSTDJST	E, F	**Revised calculation for WSTDJST:** The two following temporary reformatting steps are executed and then the WSTDJST variable is created according to the revised code: **Step 1: Temporary Reformatting** *Modify the scale of responses for the questions WST_401 to WST_406 and WST_409 from 1 to 5, to 0 to 4, and inverse WST_404 and WST_405.* If WST_401 <= 5 then WSTT401 = (WST_401 - 1) If WST_402 <= 5 then WSTT402 = (WST_402 - 1) If WST_403 <= 5 then WSTT403 = (WST_403 - 1) If WST_404 <= 5 then WSTT404 = (4 - (WST_404 - 1)) If WST_405 <= 5 then WSTT405 = (4 - (WST_405 - 1)) If WST_406 <= 5 then WSTT406 = (WST_406 - 1) If WST_409 <= 5 then WSTT409 = (WST_409 - 1) **Step 2: Temporary Reformatting** *Invert the scale of responses for the questions WSTT401 to WSTT403, WSTT404 & WST409, from 0 to 4, to 4 to 0* If WSTT401 <= 4 then WSTa401 = (4 - WSTT401) If WSTT402 <= 4 then WSTa402 = (4 - WSTT402) If WSTT403 <= 4 then WSTa403 = (4 - WSTT403) If WSTT404 <= 4 then WSTa404 = (4 - WSTT404) If WSTT409 <= 4 then WSTa409 = (4 - WSTT409) **Step 3: Final code** *Calculate the score for WSTDJST using revised code:* If WST_401 = 6, then WSTDJST = 9.96; If (WST_401 in (7, 8, 9) or WST_402 in (7, 8, 9) or WST_403 in (7, 8, 9) or WST_404 in (7, 8, 9) or WST_405 in (7, 8, 9) or WST_406 in (7, 8, 9) or WST_409 in (7, 8, 9)) then WSTDJST = 9.99; Else WSTDJST = (((WSTT405 + 1) + (WSTT406 + 1)) / 2) / (((WSTa401 + 1) + (WSTa402 + 1) + (WSTa404 + 1) + (WSTa403 + 1) + (WSTa409 + 1)) / 5)	Data file, Derived Variable document

March 2017

Suggested correction(s): Manually update the variable WSTDJST using the revised code.
Correction steps: N/A
Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding. Should you have any questions, please do not hesitate to contact us at: Health Statistics Division 613-951-1746 Electronic mail: HD-DS@statcan.gc.ca

March 2017

Date: June 2015	Item-025
To: Users of the 2009 and 2009-2010 Master and Share files	
Subject: INC_6K and INC_6J - Reversed variable labels	
Product(s) affected: 2009 and 2009-2010 Master and share files	
Year(s) affected: 2009 and 2009-2010	

Description of the problem(s):
Two "Sources of Income" response categories, "Child Tax Benefit" and "Social Assistance or Welfare", in questions INC_6J and INC_6K were reversed in the 2009 and 2009-2010 master and share files. The 2010 files are not affected.

Suggested correction(s):

Users should modify the format programs in order to switch the two answer labels i.e. INC_6J should refer to "Child Tax Benefit" and INC_6K should refer to Social Assistance or Welfare.

The table below provides the corrections for the erroneous labels in the data dictionary.

Concept	**Variable name as it appears on the questionnaire**	**Variable to consult for frequency in the data dictionary**
Sources personal income: social assistance or welfare	INC_6J	INC_6K
Sources personal income: Child tax benefits	INC_6K	INC_6J

Correction steps: n/a

Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding.

Should you have any questions, please do not hesitate to contact us at:

Health Statistics Division
613-951-1746
Electronic mail: hd-ds@statcan.gc.ca

March 2017

Date: June 2015	Item-024
To: Users of the CCHS, Cycle 1.1 to 2014	
Subject: SUI_3, SUI_5, SUI_6A-SUI_6H concepts are inaccurate	
Product(s) affected: Master and Share file Data Dictionary reports, CCHS Cycle 1.1 to 2014 (all years)	
Year(s) affected: Cycle 1.1 to 2014, including two-year files	

Description of the problem(s):

The SUI module was designed to treat respondents sensitively, due to the serious nature of the questions. Whenever a respondent answered 'No' or 'Don't Know' or refused to answer, they would skip the rest of the questions in the module.

In processing, 'Don't Know' or 'Refuse' answers to any question meant that all subsequent questions were coded 'Not Stated'. The 'No' responses, however, caused subsequent questions to be coded as 'Not Applicable'. If a respondent answered 'No' to having seriously considered suicide in the last 12 months, they would skip the question asking them if they had ever attempted suicide in their lifetime. This means that SUI_3 only applies to people who had seriously considered in the last 12 months, rather than all respondents who have seriously considered suicide in their lifetime.

Similarly for SUI_Q5, it was only asked if the respondent had answered 'Yes' to SUI_Q1, SUI_Q2, SUI_Q3 and SUI_Q4, those who had seriously considered committing suicide in the last 12 months and had actually attempted suicide in the last 12 months, rather than all those who had attempted suicide at any point in their lifetime.

Suggested correction(s):

Since respondents were skipped past questions, the there is no correction that can be made to the data. Instead, with the data as it is, the Concepts for the SUI variables should be modified to reflect the flow pattern of the module (new text in red):

SUI_3	Considered Suicide in last 12 months and Attempted suicide - lifetime
SUI_5	Consulted health professional following suicide attempt from last 12 months
SUI_6A	Suicide attempt (last 12 months) - consulted family doctor or g.p.
SUI_6B	Suicide attempt (last 12 months) - consulted psychiatrist
SUI_6C	Suicide attempt (last 12 months) - consulted psychologist
SUI_6D	Suicide attempt (last 12 months) - consulted nurse
SUI_6E	Suicide attempt (last 12 months) - consulted social worker or counsellor
SUI_6G	Suicide attempt (last 12 months) - consulted religious or spiritual advisor
SUI_6H	Suicide attempt (last 12 months) - consulted a teacher or guidance counsellor
SUI_6F	Suicide attempt (last 12 months) - consulted other health professional

March 2017

The questionnaire flows on the 'No' responses will be removed from the redesigned 2015 CCHS.
Correction steps: N/A
Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding. Should you have any questions, please do not hesitate to contact us at: Health Statistics Division 613-951-1746 Electronic mail: hd-ds@statcan.gc.ca

March 2017

Date: June 2015	Item-023
To: Users of the CCHS, cycle 1.1 and 3.1 to 2014	
Subject: UPE_Q1A – flow error	
Product(s) affected: Master, Share, Rapid Response and Public Use Microdata Files	
Year(s) affected: 1.1, 3.1 to 2014, including two-year files	
Description of the problem(s): The question UPE_Q1A asks if the respondent had done any bicycling in the past 12 months. Respondents skipped this question if they had indicated that they had done biking in the past 3 months (PAC_Q1), or that they had done bicycling to work or school in the past 3 months (PAC_Q8). Because of the skip pattern, the value for UPE_Q1A (external name UPE_01A) on all data files was set to 6 - 'Not applicable'. The value should have been set to 1 – 'Yes'. No other questions were affected by this flow.	
Suggested correction(s): If left as is, the concept for UPE_01A 'Done any bicycling in past 12 months' would exclude those who did any bicycling in the past 3 months. Since this is not intuitive, it would be clearer if the data for this variable were modified based on the answer in PAC. The value for the variable UPE_01A can easily be changed on the data file, using the values from PAC. See the correction steps below.	
Correction steps: To fix the value of UPE_01A, run the following code when working with the data file: `if PAC_1D = 1 or PAC_8 = 1 then UPE_01A = 1;`	
Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding. Should you have any questions, please do not hesitate to contact us at: Health Statistics Division 613-951-1746 Electronic mail: hd-ds@statcan.gc.ca	

March 2017

Date: June 2015	Item-022
To: Users of the CCHS master, share, and rapid response files, 2011-2013	
Subject: Labeling error in SDCDLHM	
Product(s) affected: Master, Share and Rapid Response files Data Dictionary reports	
Year(s) affected: 2011-2013, including two-year files	
Description of the problem(s): A labeling error was introduced in 2011 for the derived variable SDCDLHM. Data is not erroneous, but the incorrect label may lead to misinterpretation of the data.	
Suggested correction(s): The concept in the Data Dictionary report was mistakenly changed to "First official language – (D)". It should have remained as it was prior to 2011: "Language(s) spoken most often at home (D)"	
Correction steps: N/A	
Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding. Should you have any questions, please do not hesitate to contact us at: Health Statistics Division 613-951-1746 Electronic mail: hd-ds@statcan.gc.ca	

March 2017

Date: June 2015	Item-021
To: Users of the CCHS, Cycle 2009 to 2014	
Subject: INC_Q6 and INC_Q1 sources of income inconsistent	
Product(s) affected: Master, Share, Rapid Response and Public Use Microdata Files	
Year(s) affected: Cycle 2009 to 2014	
Description of the problem(s): In the income module, INC_Q1 asks respondents to indicate all the sources from which all household members received any income in the past 12 months (e.g. Wages and salaries, income from self-employment, EI, alimony, etc..). Later, the selected respondent is asked in INC_Q6 to indicate the sources from which they received any income. A hard edit (a prompt requiring interviewers to correct the data) was included in the specifications of the questionnaire to not allow respondents to indicate a source of personal income unless it was indicated as a source of income for the household. Unfortunately, due to an application error starting in 2009, interviewers could bypass the edit without modifying the list of household or personal sources of income. As a result of this error, a small number of cases (less than 0.45% of cases per year) have a source of personal income indicated that was not indicated as a source for the household.	
Suggested correction(s): It's not possible to verify if the personal income sources are correct and should be added to the list of household sources, or if they are incorrect and should be removed as a source of personal income. It is also not possible to verify if the respondent included themselves when reporting the total household income dollar amount. For these reasons, there is no way to accurately correct this error in the data file. It has been corrected in the 2015 survey.	
Correction steps: n/a	
Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding. Should you have any questions, please do not hesitate to contact us at: Health Statistics Division 613-951-1746 Electronic mail: hd-ds@statcan.gc.ca	

March 2017

Date: June 2014	Item-020
To: Users of the CCHS 2012 and 2011-2012 Master, Share, PUMF microdata files	
Subject: SXB_Q01 incorrectly set to not applicable.	
Product(s) affected: 2012 and 2011-2012 Master and Share microdata files, as well as the 2012 and 2011-2012 PUMFs	
Year(s) affected: 2012, 2011-2012	

Description of the problem(s):
In 2012, a new condition was added to the questionnaire in the SXB module. If a female respondent had indicated that she had given birth in the last 5 years (MEX_Q01A), then the question 'Have you ever had sexual intercourse' (SXB_Q01) would be skipped. In processing, SXB_Q01 should have been set to 'Yes', but was incorrectly set to 'Not Applicable'.

In total, 1044 records from Ontario, Northwest Territories and Yukon were affected. Note that only these geographies had selected the optional module SXB in 2011 and 2012.

The error was corrected starting with the CCHS 2013 data.

Suggested correction(s):
The affected records on the 2012 and 2011-2012 files can be corrected by using the specifications below.

Note that the universe for SXB_1 should be
"Respondents aged 15 to 49 with DOSXB = 1"

Correction steps: The code below can be run to correct records that should have been set to 'Yes' for SXB_Q01:

```
if DOSXB=1 and MEX_01=1 and DHH_AGE in (15:49) then SXB_1=1;
```

Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding.

March 2017

Date: June 2014	Item-019

To: Users of the CCHS, cycle 2.1 – 2012 master, share and public use microdata files.

Subject: CCS_182, CCS_185, LOPG020, MEX_06, PCU_154M (PCU_56N), PCU_154N (PCU_56M), PAC_7, PAC_7A, PAC_8, PAC_8B, UPE_02, UPE_02A, UPE_02B, UPE_02C, UPE_06, UPE_06A, UPE_06B, UPE_07 – Issues with format/label files, data dictionary reports. See below.

Product(s) affected: Master, Share, PUMF files

Year(s) affected: All years cycle 2.1 – 2012, including two-year files

Description of the problem(s):
Several errors have been found throughout the CCHS on the SAS or SPSS label and format files. Also, errors have been found in the 'Concept' and 'Question' fields on the Data Dictionary report, as well as the 'Concept' fields on the Alphabetic Index, Subject Index and Record Layout. Data is not erroneuous, but the incorrect labels may lead to misinterpretation of the data.

Variables and Reference periods affected:

- **CCS_182**, **CCS_185**: Cycle 2.1 – 2012, all years including PUMF files
- **LOPG020**: 2010, 2012, 2011-2012; PUMF files only
- **PCU_154M**, **PCU_154N**: 2012, 2011-2012; including PUMF files
- **PCU_56N**, **PCU_56M**: 2008
- **PAC_7**, **PAC_7A**, **PAC_8**, **PAC_8B**, **UPE_02**, **UPE_02A**, **UPE_02B**, **UPE_02C**, **UPE_06**, **UPE_06A**, **UPE_06B**, **UPE_07**: 2012, 2011-2012; including PUMF files

Suggested correction(s):
The table below provides the corrections for the erroneous labels, as well as which files were affected.

Variable	Description	Files affected
CCS_182	Code 6 should be "10 years or more" not "5 years or more". In Cycle 2.1, code 5 should be "5 to < 10 years".	HS_pfe.sas, HS_pff.sas, HSvalf.sps, HSvale.sps, B2020 HS.IVX
CCS_185	Code 6 should be "10 years or more" not "5 years or more". In Cycle 2.1, code 5 should be corrected to "5 to < 10 years".	
LOPG020	Code 6 should be "LAYOFF,STRIKE,LOCKOUT"	HS_pfe.sas, HS_pff.sas, HSvalf.sps, HSvale.sps

March 2017

MEX_06	Concept should be 'Duration of breastfeeding last child'	HS_lbe.sas, HS_lbf.sas, HSvare.sps, HSvarf.sps, Data Dictionary, Alpha Index, Topical Index, Record Layout
PCU_154M (PCU_56N in 2008)	Question should be: "What are the reasons that you have not had a general physical check-up in the past 3 years? - Unable to leave the house because of a health problem"	Data Dictionary
PCU_154N (PCU_56M in 2008)	Question should be: "What are the reasons that you have not had a general physical check-up in the past 3 years? - Other"	
PAC_7A	Question should be "How many times?"	
PAC_8B	Question should be "About how much time did you spend on each occasion?"	
PAC_7	Concept should be "Walked to work or school / last 3 months"	Data Dictionary, Alpha Index, Topical Index, Record Layout, B2020 HS.IVX
PAC_8	Concept should be "Bicycled to work or school / last 3 months"	
UPE_02	Concept should be "In-line skating or rollerblading - past 12 mo"	
UPE_02A	Concept should be "Frequency - wears a helmet - in-line skating"	
UPE_02B	Concept should be "Frequency - wears wrist guards - in-line skating"	
UPE_02C	Concept should be "Frequency - wears elbow pads - in-line skating"	
UPE_06	Concept should be "Has done skateboarding - past 12 mo"	
UPE_06A	Concept should be "Frequency - wears a helmet - skateboarding"	
UPE_06B	Concept should be "Frequency - wears wrist guards - skateboarding"	
UPE_07	Concept should be "Played ice hockey past 12 months"	

March 2017

Correction steps: The SAS and SPSS format and layout files can be opened and edited using a word processor.
Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding. Should you have any questions, please do not hesitate to contact us at: Health Statistics Division 613-951-1746 Electronic mail: hd-ds@statcan.gc.ca

March 2017

Date: June 2014	Item-018
To: All users of CCHS files listed below. These include files with reference year 2009-2013. Only the files listed below are affected.	
Subject: Error in CCCDDIA logic	
Product(s) affected: **2009:** Master, Share, BC buy-in, and Rapid responses on: Sleep Apnea (SLP), Osteoporosis (OST), and Infertility (IFT) **2010:** Master, Share, PUMF, and Rapid responses on: H1N1, Infertility (IFT), and Stigma and Mental Health (STG-MHE) **2009-2010:** Master, Share, and PUMF **2011:** Master, Share, Rapid response on neighbourhood environment (NBE), the Survey of Living with Neurological Conditions in Canada (SLNCC)-CCHS – linked file, and the Survey on Living with Chronic Diseases in Canada (SLCDC) – Diabetes and Respiratory files **2012:** Master, Share, PUMF, and Rapid responses on: Canada Food Guide (CFG) and Food Skills – Part 1 (FS1) **2011-2012**: Master, Share, and PUMF **2013:** Rapid response on Food Skills – Part 2 (FS2)	
Year(s) affected: 2009, 2010, 2009-2010, 2011, 2012, 2011-2012, and 2013	
Description of the problem(s): The Diabetes Type derived variable (CCCDDIA) has a flaw in the logic that allowed respondents who should have been coded to gestational diabetes to be coded as Type 2 diabetes or 'not stated'. Female respondents who answered CCC_10A=1 and CCC_10B=2 should have been classified as gestational diabetes. However, several cases also met the condition for Type 2 diabetes or for not stated. Because these other categories were derived first, these cases were coded as such, before the check for gestational diabetes could be run. Additionaly, all of the cases that were coded as '4' could actually be correctly coded as type 2 diabetes. Because of the faulty logic, these cases did not meet any of the conditions and would not have been coded. This is likely the reason for the creation of the category 4 in the first place.	
Suggested correction(s): According to the Ng-Dasgupta-Johnson algorithm, upon which CCCDDIA is based, gestational diabetes should be derived first. In practice however, it is typical to list the DV code types in ascending order after the processing codes are derived. To preserve the order of DV codes and fix the problems, the conditions for 'not stated' and type 2 have been rewritten with an extra condition that ensures there is no overlap with gestational diabetes. The new rule for type 2 diabetes now also covers all of the cases that would have otherwise been left uncoded and assigned a value of	

March 2017

4 – 'unable to classify'. The new DV code now properly classifies all respondents without the need for this catch-all code. The corrected code for the derived variable is:

Value	Condition(s)	Description	Notes
6	CCC_101 > 1	Population exclusions	NA
9	(CCC_10A in (7,8,9) or CCC_10B in (7,8,9) or CCC_10C in (97,98,99) or CCC_101 in (7,8,9) or CCC_102 in (997,998,999) or CCC_105 in (7,8,9) or CCC_106 in (7,8,9)) and (CCC_10A in (2,6,7,8,9) or CCC_10B in (1,6,7,8,9))	At least one required question was not answered (don't know, refusal, not stated). Also, gestational diabetes cannot be derived.	NS
1	(DHH_SEX = 1 and CCC_101 = 1 and CCC_105 = 1 and CCC_106 = 2 and (CCC_10C <=3 and (DHH_AGE < 30 or CCC_102 < 30))) or (DHH_sex = 2 and CCC_101 = 1 and CCC_10B in (1,6) and CCC_105 = 1 and CCC_106 = 2 and (CCC_10C <=3 and (DHH_AGE < 30 or CCC_102 < 30)))	Type 1 diabetes	
2	CCC_101 = 1 and (CCC_105 = 2 or CCC_102 >= 30 or CCC_10C > 3 or CCC_106 = 1 or (CCC_105 = 1 and (CCC_102 >= 30 or CCC_10C > 3))) and (CCC_10A in (2,6,7,8,9) or CCC_10B in (1,6,7,8,9))	Type 2 diabetes	
3	CCC_101 = 1 and DHH_SEX = 2 and CCC_10A = 1 and CCC_10B = 2	Gestational diabetes	

"Patch files" have been created for all affected files. They contain all records with the

March 2017

unique record identifier(s), as well as the correctly derived CCCDDIA. These patches can be used to replace CCCDDIA from the affected files by merging with the record identifier(s).
Correction steps: A “patch file” is available on request.
Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding. Should you have any questions, please do not hesitate to contact us at: Health Statistics Division 613-951-1746 Electronic mail: hd-ds@statcan.gc.ca

March 2017

Date: June 2014	Item-017
To: Users of the CCHS 2011-2012 Master, Share microdata files	
Subject: PSC suppressed for PEI on 2011-2012 file.	
Product(s) affected: 2011-2012 Master and Share microdata files. Note: The 2011-2012 PUMF was not affected.	
Year(s) affected: 2011-2012	
Description of the problem(s): The optional content module 'Patient satisfaction – Community Based Care' (PSC) was selected in 2011 and 2012 by Prince Edward Island. When the 2011-2012 files were created from the two single year files, the responses to the PSC variables were all incorrectly set to 'Not Applicable'. Since both single year files had PSC data for PEI, the two-year files should have as well.	
Suggested correction(s): A "patch file" has been created which contains all records with the unique record identifiers as well as the corrected PSC variables. This can be used to replace the variables on the 2011-2012 file.	
Correction steps: A "patch file" is available on request.	
Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding. Should you have any questions, please do not hesitate to contact us at: Health Statistics Division 613-951-1746 Electronic mail: hd-ds@statcan.gc.ca	

March 2017

Date: June 2013	Item-016

To: Users of the CCHS 2007, 2008 and 2007-2008, 2009 Master, Share microdata files

Subject: Labeling errors in SDC_4, question on ancestry

Product(s) affected: 2007, 2008, 2007-2008 and 2009 Master and Share microdata files and 2009 Rapid Response files

Year(s) affected: 2007, 2008, 2007-2008 and 2009

Description of the problem(s):
Labeling errors were introduced in 2007 for several variables in the question on ancestry, SDC_4. Data is not erroneous, but the incorrect labels may lead to misinterpretation of the data.

Suggested correction(s):
The table below provides the corrections for the erroneous labels in the data dictionary.

YEAR	Ethnic/cultural group of interest	Variable name as it appears on Questionnaire	Data Dictionary	
			Variable to consult for frequency	Label (incorrect)
2007	NORWEGIAN	**SDCE_4P**	**SDC_4T**	N. A. INDIAN

Canadian Community Health Survey – Annual Component
Errata

March 2017

Date: June 2013	Item-015

To: Users of the CCHS 2007, 2008 and 2007-2008 Master, Share and PUMF micro data files

Subject: Labelling errors in ALW_2A1, ALW_2A2, ALW_2A3, ALW_2A4, ALW_2A5, ALW_2A6, ALW_2A7

Product(s) affected: 2007, 2008, and 2007-2008 Master, Share and PUMF microdata files.

Year(s) affected: 2007, 2008, and 2007-2008

Description of the problem(s):
Labelling errors were introduced in 2007 for several variables in the ALW module Data is not erroneous, but the incorrect labels may lead to misinterpretation of the data.

Suggested correction(s):
The table below provides the corrections for the erroneous labels.

Variable Name Suffix	Labels on Released Data Files and Documentation	Correct Labels Are:
ALW_2A1	Number of drinks - Sunday	Number of drinks - Day1
ALW_2A2	Number of drinks - Monday	Number of drinks – Day2
ALW_2A3	Number of drinks - Tuesday	Number of drinks – Day3
ALW_2A4	Number of drinks - Wednesday	Number of drinks – Day4
ALW_2A5	Number of drinks - Thursday	Number of drinks – Day5
ALW_2A6	Number of drinks - Friday	Number of drinks – Day6
ALW_2A7	Number of drinks - Saturday	Number of drinks – Day7

Correction steps: N/A

March 2017

Date: June 2012	Item-013
To: Users of the CCHS 2009, 2010 2009-2010 Master and Share micro data files, and Public Use Micro data Files (PUMF)	
Subject: Flow error during collection related to ETS_35 question (on smoking allowed inside their home)	
Product(s) affected: 2009, 2010, 2009-2010 Master and Share microdata files and 2009-2010 PUMF.	
Year(s) affected: 2009, 2010, and 2009-2010	
Description of the problem(s): The high number of "Not Applicable" responses for 2009 and 2010 resulted from an error in the application flow. Respondents who answered ETS_10 = 1 were asked this question instead of those who answered ETS_10 = 2. Although, it is possible that people smoke inside their home even if it is not allowed, respondents who answer "No" to smoking inside the house are not asked this question.	
Suggested correction(s): It's not possible to correct this error in the data file. It has been corrected in the 2011 survey.	
Correction steps: N/A	
Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding. Should you have any questions, please do not hesitate to contact us at: Health Statistics Division 613-951-1746 Electronic mail: hd-ds@statcan.gc.ca	

March 2017

Date: June 2011	Item-012
To: Users of the CCHS 2005, 2007, 2007-2008 Master and Share micro data files, and 2005, 2007-2008 Public Use Micro data Files (PUMF)	
Subject: Flow error during collection related to MAM_038 question (on hysterectomy)	
Product(s) affected: 2005, 2007, 2007-2008 Master and Share micro data files and 2005, 2007-2008 PUMF.	
Year(s) affected: 2005, 2007, and 2007-2008	
Description of the problem(s): The high number of "Not Stated" responses for 2005 and 2007 resulted from an error in the application flow. Women aged 50 and over should have skipped only question MAM_Q037 (in 2005) / HWT_Q1 (in 2007), but instead they also skipped MAM_Q038.	
Suggested correction(s): The error was corrected starting with the CCHS 2008 data.	
Correction steps: N/A	
Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding. Should you have any questions, please do not hesitate to contact us at: Health Statistics Division 613-951-1746 Electronic mail: hd-ds@statcan.gc.ca	

March 2017

Date: June 2011	Item-011
To: Users of the 2009 CCHS master and share microdata files	
Subject: Error corrected in the Smoking Module – Modified version derived variable, SMKDSTY	
Product(s) affected: 2009 Share and Master microdata files.	
Year(s) affected: 2001, 2003, 2005, 2007, 2007-2008 2009	
Description of the problem(s): In 2010, the programming of the response categories for this derived variable was changed. Respondents who answered SMK_202=3, SMK_05D=5, SMK_01A=2, and SMK_01B=1 were being classified as SMKDSTY=99 and should have been classified as SMKDSTY=5. A new condition and brackets were added to ensure that the category was being assigned correctly to all cases.	
Suggested correction(s): To correctly process this derived variable for 2001, 2003, 2005, 2007, 2007-2008 and 2009 please use the specifications below.	
Correction steps: The correction is highlighted and in bold font. SKMDSTY = 5 (SMK_202 = 3 AND **((**SMK_05D = 2 **OR SMK_05D = 6)** AND (SMK_01A = 1 OR SMK_01B = 1)**))**	
Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding. Should you have any questions, please do not hesitate to contact us at: Health Statistics Division 613-951-1746 Electronic mail: hd-ds@statcan.gc.ca	

March 2017

Date: June 2011	Item-010
To: Users of the 2009 CCHS master and share microdata files	
Subject: Error corrected in the Physical Activities Module – Modified version derived variable, PACFLTI	
Product(s) affected: 2009 Share and Master microdata files.	
Year(s) affected: 2007, 2009	
Description of the problem(s): In 2010, the programming of the response categories for this derived variable was changed. Respondents who provided a mix of valid answer and non response to PAC_1V, PAC_7, or PAC_8 have been coded to category 1 or 2 in PACFLTI. Previously, if they provided a non response to either PAC_1V, PAC_7, or PAC_8 they were coded as non response in PACFLTI.	
Suggested correction(s): To correctly process this derived variable for 2007, 2008 2007-2008 and 2009,please use the specifications below.	
Correction steps: The order of conditions was changed. The correction is highlighted and in bold font. 9 ADM_PRX = 1 1 PAC_1V = 2 or PAC_7 = 1 or PAC_8 = 1 2 (PAC_1V = 1) and (PAC_7 = 2, 3) and (PAC_8 = 2, 3) **9 (PAC_1V = DK, R, NS) or (PAC_7 = DK, R, NS) or (PAC_8 = DK, R, NS)**	
Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding. Should you have any questions, please do not hesitate to contact us at: Health Statistics Division 613-951-1746 Electronic mail: hd-ds@statcan.gc.ca	

March 2017

Date: June 2010	Item-009
To: Users of the 2007, 2008 and 2007-2008 CCHS master and share microdata files	
Subject : Error corrected in the Household Food Security Status – Modified version derived variable, FSCDHFS2	
Product(s) affected: 2007, 2008, 2007-2008 Share and Master microdata files.	
Year(s) affected: 2007, 2008 and 2007-2008	
Description of the problem(s): Some households with children were improperly classified as moderately food insecure but should have been classified as severely food insecure as a result of a specification error. The error was corrected starting with the CCHS 2009 data.	
Suggested correction(s): To recalculate this derived variable for 2007, 2008 and 2007-2008, please use the specifications below.	
Correction steps: The correction is in bold font. [DHHTDKS = 1 and (2 <= FSCASUM <= 5) and (2 <= FSCCSUM <= 4)] or **[DHHTDKS = 1 and** **(((2 <= FSCASUM <= 5) and(FSCCSUM <= 4)) or** **((FSCASUM <= 5) and(2 <= FSCCSUM <= 4)))]** or [DHHTDKS = 0 and (2 <= FSCASUM <= 5)]	
Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding. Should you have any questions, please do not hesitate to contact us at: Health Statistics Division 613-951-1746 Electronic mail: hd-ds@statcan.gc.ca	

March 2017

Date: October 2009	Item-008
To: Users of the 2008 CCHS master and share microdata files	
Subject: Error with the flow of some answers in question CCC_Q073	
Product(s) affected: 2008 Share and Master microdata files.	
Year(s) affected: 2008	
Description of the problem(s): Respondents who answered question CCC_Q073 as "2 – *No*", "Refusal" or "Don't Know" skipped to question CCC_Q081, while they should have flowed to condition CCC_C073A. Therefore, respondents who did not take medication for hypertension are automatically excluded from the universe of questions CCC_Q073A and CCC_Q073B.	
Suggested correction(s): The error was corrected starting with the CCHS 2009 data.	
Correction steps: N/A	
Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding. Should you have any questions, please do not hesitate to contact us at: Health Statistics Division 613-951-1746 Electronic mail: hd-ds@statcan.gc.ca	

March 2017

Date: October 2009	Item-007
To: Users of the 2007 and 2005 CCHS master and share files	
Subject: Certain values were assigned to the wrong variables.	
Product(s) affected: 2007: Master file and share files for all provinces and territories. 2005: Master file and its subsamples, share file and its subsamples and public use microdata file and its subsamples.	
Year(s) affected: 2007 and 2005	

Description of the problem(s): When 2007 and 2005 data was processed, the values of certain variables were assigned to other variables. See the table below for the modules and variables affected and the provinces affected in the case of optional content.

2007				
Modules:	**Breast examination (BRX)**	**Home health care services (HMC)**		**Mammography (MAM)**
Content type	Optional	Optional		Optional
Provinces affected	New Brunswick, Saskatchewan and the Northwest Territories	Ontario		Newfoundland and Labrador, Nova Scotia, New Brunswick, Ontario, Saskatchewan and the Northwest Territories
Variables containing incorrect values	BRX_16N BRX_16O BRX_16M	HMC_10I HMC_10C HMC_10D HMC_10E HMC_10F HMC_10G HMC_10H HMC_15N HMC_15O	HMC_15M HMC_16I HMC_16C HMC_16D HMC_16E HMC_16F HMC_16G HMC_16H	MAM_36N MAM_36O MAM_36M

March 2017

2005					
Module	**Breast examination (BRXE)**	**Home health care services (HMCE)**	**Mammography (MAME)**	**Alcohol use (ALCE)**	**Sexual behaviour (SXBE)**
Content type	Optional	Common	Common	Common	Common
Provinces/ territories affected	Ontario Yukon	All	All	All	All
Variables	BRXE_16N BRXE_16O BRXE_16M	HMCE_10C HMCE_10D HMCE_10E HMCE_10F HMCE_10G HMCE_10H HMCE_10I HMCE_15M HMCE_15N HMCE_15O HMCE_16C HMCE_16D HMCE_16E HMCE_16F HMCE_16G HMCE_16H HMCE_16I	MAME_36M MAME_36N MAME_36O	ALCE_7M ALCE_7N	SXBE_13E SXBE_13F SXBE_13G

March 2017

Suggested correction(s): Users must recover the correct values from the variables where they are found. The table below shows the correspondence between the variables containing incorrect values (column A) and the names of the variables to which they must be renamed (column B) to obtain the correct values. The table is shown by product year.

2007		2005	
Column A **Variables with incorrect values**	**Column B** **Name of the renamed variable**	**Column A** **Variables with incorrect values**	**Column B** **Name of the renamed variable**
BRX_16N	BRX_16O	BRXE_16N	BRXE_16O
BRX_16O	BRX_16M	BRXE_16O	BRXE_16M
BRX_16M	BRX_16N	BRXE_16M	BRXE_16N
HMC_10I	HMC_10H	HMCE_10I	HMCE_10H
HMC_10C	HMC_10I	HMCE_10C	HMCE_10I

Canadian Community Health Survey – Annual Component
Errata

March 2017

Correction process:

1. Create a temporary file including the variables in column **A**.
2. Rename the variables in column **A** to temporary variables based on the corresponding variables in column **B** (e.g. BRX_16M to BRX_16N_00, and HMC_10D to HMC_10C_00, etc.).
3. Rename the temporary variables (e.g. BRX_16N_00, HMC_10C_00, etc.) to the correct variables as indicated in column B (e.g. BRX_16N, HMC_10C, etc.).
4. Combine the temporary file which now includes the variables with their correct values with the main data file.

March 2017

Date: October 2009	Item-006

To: 2007 master or share file users

Subject: Incorrect variable labels

Product(s) affected: Master and share files

Year(s) affected: 2007

Description of the problem(s):

The labels attached to certain variables are incorrect in the master file and the share files and in their respective data dictionnary. The table below gives the variable names along with their old and new labels.

Variable	**Question**	**Labels in the files and codebooks**	**Must be replaced by:**
SXB_13F	Contraceptive method last time	Other	Contraceptive injections
SXB_13G	Contraceptive method last time	Contraceptive injections	None
SXB_13E	Contraceptive method last time	None	Other

Suggested correction(s): Rename the variables with the correct names.

Correction steps: N/A

March 2017

Date: October 2009	Item-005
To: Users of the 2005 master or share file	
Subject: The household weight of the master and all share files is invalid (small error)	
Product(s) affected: Household weight file hs_hhwt.txt	
Year(s) affected: 2005	
Description of the problem(s): The main household weight variable (WTSE_MHH on the master file and WTSE_SHH on the share file) on all the HS_HHWT.txt file is invalid and differs from their corresponding FWGT weight on the B5_HH.txt Bootstrap file. Since Bootvar uses the variable FWGT to calculate the final estimates, any analysis on the 2005 Households weights using Bootvar would be correct and would not need to be redone. However, any preliminary analysis based only on the variables WTSE_MHH or WTSE_SHH would be incorrect and would need to be revised. Users should know that the errors were considered minimal.	
Suggested correction(s): The master and share files have been redone with the corrected household weight and are available upon request.	
Correction steps: N/A	
Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding. Should you have any questions, please do not hesitate to contact us at: Health Statistics Division 613-951-1746 Electronic mail: hd-ds@statcan.gc.ca	

March 2017

Date: December 21, 2007	Item-004
To: Data users of cycle 2.1, sub-sample 3 – Master and share file	
Subject: Error on number of person interviewed in the following document: "Guidelines for the use of sub-sample variables"	
Cycle(s) affected: Cycle 2.1	
Product(s) affected: Guidelines for the use of sub-sample variables – Master and share file	
Description of the problem(s): Page 7 of the document : • Number 18,981 replaces 18,091 in the following sentense : "A total of ~~18,091~~ 18,981 respondents were interviewed for HSAS at the same time as their CCHS interview." • Number 13,024 replaces 12,031 in the following sentense : "A total of ~~12,031~~ 13,024 respondents were re-contacted after having been interviewed previously for CCHS."	
Suggested correction: N/A	
Corrective Pseudo-code: N/A	
Contact us: We regret any inconvenience this may have caused you or your organization and thank you in advance for your understanding. Should you have any questions, please do not hesitate to contact us at: Health Statistics Division 613-951-1746 Electronic mail: hd-ds@statcan.gc.ca	

March 2017

Date: October 12, 2007	Item-003
To: Data Users and licensees of the Canadian Community Health Survey data, Cycles 2.1 and 3.1, **Public Use Microdata File**	
Subject: Derived variable on work stress scale – Job strain (WSTCDJST and WSTEDJST)	
Cycle(s) affected: Cycle 2.1 (optional content selected by 12 health regions within Newfoundland and Labrador, Ontario and Saskatchewan) Cycle 3.1 (optional content selected by all health regions in Quebec and Saskatchewan).	
Product(s) affected: Derived variable on work stress scale – Job strain (WSTCDJST and WSTEDJST) Referred to hereafter as WSTnDJST where n = C or E.	
Description of the problem(s): The Job strain scale should reflect the ratio of the psychological demands and decision making leeway in accordance with the principle that strong demands combined with weak decision making autonomy generate more stress. Certain variables from the denominator of the WSTnDJST derived variable are incorrectly specified in the ***Derived Variable (DV) Specifications*** document for cycles 2.1 and 3.1. The data are therefore erroneous. The ratio of strong demands and decision making leeway result is scores that are too high.	
Suggested correction(s): <u>Public use microdata file (PUMF):</u> Cannot be corrected by users given the fact that only the derived variables exist on the file. User support via remote access is available upon request. <u>Share and Master Files:</u> A temporary reformatting step aiming to invert certain variables must be added to the specifications for the WSTnDJST variable. The step to invert the categories (to arrange them from 4 to 0 rather than from 0 to 4) must be applied to the following variables: WSTn401, WSTn402, WSTn403, WSTn405 and WSTn409. A “patch file” is available on request.	

March 2017

Corrective Pseudo-code:
The two following temporary reformatting steps are executed and then the WSTnDJST variable is created according to the DV specifications:

Step 1 : Temporary Reformatting

Modify the scale of responses for the questions WSTn_401 to WSTn_406 and WSTn_409 from 1 to 5, to 0 to 4

If WSTn_401 <= 5 then WSTn_401 = (WSTn_401 - 1)
If WSTn_402 <= 5 then WSTn_402 = (WSTn_402 - 1)
If WSTn_403 <= 5 then WSTn_403 = (WSTn_403 - 1)
If WSTn_404 <= 5 then WSTn_404 = (WSTn_404 - 1)
If WSTn_405 <= 5 then WSTn_405 = (WSTn_405 - 1)
If WSTn_406 <= 5 then WSTn_406 = (WSTn_406 - 1)
If WSTn_409 <= 5 then WSTn_409 = (WSTn_409 - 1)

Step 2 : Temporary Reformatting

Invert the scale of responses for the questions WSTn_401 to WSTn_403, WSTn_405 and WSTn_409, from 0 to 4, to 4 to 0

If WSTn_401 <= 4 then WSTn_401 = (4 - WSTn_401)
If WSTn_402 <= 4 then WSTn_402 = (4 - WSTn_402)
If WSTn_403 <= 4 then WSTn_403 = (4 - WSTn_403)
If WSTn_405 <= 4 then WSTn_405 = (4 - WSTn_405)
If WSTn_409 <= 4 then WSTn_409 = (4 - WSTn_409)

Step 3 :

See WSTnDJST in the ***Derived Variable (DV) Specifications*** document.

March 2017

Date: October 12, 2007	Item-002
To: Data Users and licensees of the Canadian Community Health Survey data, Cycle 3.1, Public Use Microdata File (PUMF)	
Subject: Question universes in 6 modules in the PUMF data dictionary for Cycle 3.1 are incorrect.	
Cycle(s) affected: Cycle 3.1	
Product(s) affected: Data dictionary of the Cycle 3.1 PUMF in English [English Data Dictionary (Freqs).pdf] and in French [French Data Dictionary (Freqs).pdf].	
Description of the problem(s): The derived variable descriptions for the following modules: • Smoking (SMK) • Colorectal Cancer Screening (CCS) • Exposure to second-hand smoke (ETS) • Prostate Cancer Screening (PSA) • Smoking – Physician counseling (SPC) • Youth Smoking (YSM)	

March 2017

Suggested correction(s):

- Smoking (SMK):

  - SMKEDYCS : Respondents who answered SMKE_202 = (1, 7 or 8) or SMKE_01A = 8 and SMKE_01B = 8

- Colorectal Cancer Screening (CCS):

  - CCSEFOPT: All respondents
  - CCSE_180 : Respondents aged 35 and over with CCSEFOPT = 1
  - CCSE_182 : Respondents who answered CCSE_180 = (1, 7 or 8)
  - CCSE_83A : Respondents who answered CCSE_180 = (1, 7 or 8)
  - CCSE_83B : Respondents who answered CCSE_180 = (1, 7 or 8)

- Exposure to second-hand smoke (ETS):

  - ETSE_10 : Respondents with DHHEDHSZ > 1 or who answered (SMKE_202 = (3, 7 or 8) or (SMKE_01A = 8 and SMKE_01B = 8))
  - ETSE_G11 : Respondents who answered ETSE_10 = (1, 7 or 8)
  - ETSE_20: Respondents who answered SMKE_202 = (3, 7 or 8) or (SMKE_01A = 8 and SMKE_01B = 8)
  - ETSE_20B: Respondents who answered SMKE_202 = (3, 7 or 8) or (SMKE_01A = 8 and SMKE_01B = 8)

- Prostate Cancer Screening (PSA) :

  - PSAEFOPT : All respondents
  - PSAE_170 : Males aged 35 and over with PSAEFOPT = 1
  - PSAE_172 : Respondents who answered PSAE_170 = (1, 7 or 8)
  - PSAE_73A : Respondents who answered PSAE_170 = (1, 7 or 8)
  - PSAE_73B : Respondents who answered PSAE_170 = (1, 7 or 8)
  - PSAE_73C : Respondents who answered PSAE_170 = (1, 7 or 8)
  - PSAE_73G : Respondents who answered PSAE_170 = (1, 7 or 8)
  - PSAE_ 73D : Respondents who answered PSAE_170 = (1, 7 or 8)
  - PSAE_73E : Respondents who answered PSAE_170 = (1, 7 or 8)
  - PSAE_73F : Respondents who answered PSAE_170 = (1, 7 or 8)
  - PSAE_174 : Males aged 35 and over with PSAEFOPT = 1
  - PSAE_175 : Respondents who answered PSAE_174 = (1, 7 or 8) or PSAE_170 = 8

March 2017

- Smoking – Physician counseling (SPC) :

  - SPCEFOPT : All respondents

  - SPCE_10 : Respondents with SPCEFOPT = 1 who answered (SMKE_202 = (1 or 2) or SMKE_06A = 1 or SMKE_09A = 1 and HCUE_1AA = (1, 7 or 8) or SMKE_01A = 8 and SMKE_01B = 8 or SMKE_202 = (7 or 8) or SMKE_06A = (7 or 8) or SMKE_09A = (7 or 8))

  - SPCE_11 : Respondents with SPCEFOPT = 1 who answered SPCE_10 = (1, 7 or 8) or SMKE_01A = 8 and SMKE_01B = 8 or SMKE_202 = (7 or 8) or SMKE_06A = (7 or 8) or SMKE_09A = (7 or 8) or HCUE_1AA = (7 or 8) and (SMKE_202 = (1 or 2) or SMKE_06A = 1 or SMKE_09A = 1)

  - SPCE_12 : Respondents with SPCEFOPT = 1 who answered SPCE_11 = (1, 7 or 8) or SPCE_10 = (7 or 8) or SMKE_01A = 8 and SMKE_01B = 8 or SMKE_202 = (7 or 8) or SMKE_06A = (7 or 8) or SMKE_09A = (7 or 8) or HCUE_1AA = (7 or 8) and (SMKE_202 = (1 or 2) or SMKE_06A = 1 or SMKE_09A = 1)

  - SPCE_13 : Respondents with SPCEFOPT = 1 who answered SPCE_11 = (1, 7 or 8) or SPCE_10 = (7 or 8) or SMKE_01A = 8 and SMKE_01B = 8 or SMKE_202 = (7 or 8) or SMKE_06A = (7 or 8) or SMKE_09A = (7 or 8) or HCUE_1AA = (7 or 8) and (SMKE_202 = (1 or 2) or SMKE_06A = 1 or SMKE_09A = 1)

  - SPCE_14A : Respondents with SPCEFOPT = 1 who answered SPCE_13 = (1, 7 or 8) or SPCE_12 = (7 or 8) or SPCE_11 = (7 or 8) or SPCE_10 = (7 or 8) or SMKE_01A = 8 and SMKE_01B = 8 and SMKE_202 = (7 or 8) and SMKE_06A = (7 or 8) and SMKE_09A = (7 or 8) and HCUE_1AA = (7 or 8) and (SMKE_202 = (1 or 2) and SMKE_06A = 1 and SMKE_09A = 1)

  - SPCE_14B : Respondents with SPCEFOPT = 1 who answered SPCE_13 = (1, 7 or 8) or SPCE_12 = (7 or 8) or SPCE_11 = (7 or 8) or SPCE_10 = (7 or 8) or SMKE_01A = 8 and SMKE_01B = 8 and SMKE_202 = (7 or 8) and SMKE_06A = (7 or 8) and SMKE_09A = (7 or 8) and HCUE_1AA = (7 or 8) and (SMKE_202 = (1 or 2) and SMKE_06A = 1 and SMKE_09A = 1)

  - SPCE_14C : Respondents with SPCEFOPT = 1 who answered SPCE_13 = (1, 7 or 8) or SPCE_12 = (7 or 8) or SPCE_11 = (7 or 8) or SPCE_10 = (7 or 8) or SMKE_01A = 8 and SMKE_01B = 8 and SMKE_202 = (7 or 8) and SMKE_06A = (7 or 8) and SMKE_09A = (7 or 8) and HCUE_1AA = (7 or 8) and (SMKE_202 = (1 or 2) and SMKE_06A = 1 and SMKE_09A = 1)

March 2017

- SPCE_14D : Respondents with SPCEFOPT = 1 who answered SPCE_13 = (1, 7 or 8) or SPCE_12 = (7 or 8) or SPCE_11 = (7 or 8) or SPCE_10 = (7 or 8) or SMKE_01A = 8 and SMKE_01B = 8 and SMKE_202 = (7 or 8) and SMKE_06A = (7 or 8) and SMKE_09A = (7 or 8) and HCUE_1AA = (7 or 8) and (SMKE_202 = (1 or 2) and SMKE_06A = 1 and SMKE_09A = 1)

- SPCE_14E : Respondents with SPCEFOPT = 1 who answered SPCE_13 = (1, 7 or 8) or SPCE_12 = (7 or 8) or SPCE_11 = (7 or 8) or SPCE_10 = (7 or 8) or SMKE_01A = 8 and SMKE_01B = 8 and SMKE_202 = (7 or 8) and SMKE_06A = (7 or 8) and SMKE_09A = (7 or 8) and HCUE_1AA = (7 or 8) and (SMKE_202 = (1 or 2) and SMKE_06A = 1 and SMKE_09A = 1)

March 2017

Date: October 12, 2007	Item-001
To: Data Users and licensees of the Canadian Community Health Survey data, Cycle 3.1, Public Use Microdata File (PUMF)	
Subject: Derived variable documentation contains misleading information indicating that some variables are included in the PUMF when they are not.	
Cycle(s) affected: Cycle 3.1	
Product(s) affected: Cycle 3.1 PUMF derived variable documentation in English (DERIVE_E.pdf) and in French (DERIVE_F.pdf).	
Description of the problem(s): The derived variable descriptions for the following modules: - Smoking – Cessation Aids (SCA) - Smoking – Nicotine dependence (NDE) - Smoking – Stages of change (SCH) indicate that the derived variables are available in the PUMF, while they are not. Since these modules have only been selected by one or two territories, the information is sensitive to respondent identity disclosure and is therefore not included in the PUMF.
