Introduction

Note on the subsample:
A separate weight was created for the analysis of the subsample of the activity monitor data (wgt_am), even though all respondents wereasked to wear the activity monitor for one week following the MEC appointment. For this reason the activity monitor data is not a truesubsample. Analysis could only be performed for 6 to 79 year old respondents who had at least 4 days with at least 10 hours of validdata and 3 to 5 year old respondents who had at least 3 days with at least 5 hours of valid data. To compensate for any bias due to adifference in the respondents who had the required number of valid days of data and those that did not, a separate weight was createdfor the analysis of activity monitor data, and used in the creation of this data dictionary.

Variable Name: CLINICID **Length:** 8.0 **Position:** 1

Question Name:

Concept: Clinic identifier of selected respondent

Question Text:

Universe: All respondents

Note:

Variable Name: AMMDVAL **Length:** 3.0 **Position:** 9

Question Name:

Concept: Number of valid days

Question Text:

Universe: All respondents

Note: A valid day is defined as 5 or more hours of wear time for 3 to 5 year olds or 10 or more hours of wear time for 6 to 79 year olds.
